

Enhancing the biometric health screening experience with the Rally Biometrics Dashboard

Empower employees to know their risks and improve their health

This biometrics dashboard is the new front-end to Biometric Solutions for clients who use the Rally digital platform. The dashboard has been designed to enhance your employees' screening experience and drive participation so you may better understand your organization's health risks and plan future health programs.

This digital front-end to Biometric Solutions provides a single location for employees to quickly access Quest Diagnostics to schedule biometric screenings, as well as view and understand their screening results. By simplifying the user experience and integrating incentives, employees are more empowered to manage and improve their health.

Simplified scheduling and preparation

The screenshot shows the Rally Biometrics Dashboard interface. It includes a navigation bar with links for HOME, Find Care & Costs, Health Plan, Health & Wellness, Rewards, and Resources. The main content area is titled "Biometrics Dashboard" and includes sections for "About Your Screening", "Rewards Program", and "Tips to prepare for your screening".

- Pre-screening:** A direct link to Quest Diagnostics provides easy access to schedule a biometric screening and the Physician Results Form.
- Educational Content:** Provides educational content to improve knowledge of screening tests and how to prepare for them.
- Rewards Program:** Displays rewardable activities, such as completing screenings (where applicable).
- Tips to prepare:** Provides useful information in advance of screening.

Engaging individuals with actionable data insights

The image displays three screenshots of the Rally Biometrics Dashboard, each with an orange callout box pointing to a specific feature:

- Post-screening Your screening results page:** The first screenshot shows a summary of screening results for February 15th, 2020. It indicates 2 results are 'In Desirable Range' and 4 are 'Out of Desirable Range'. A specific result for Body Mass Index (BMI) is highlighted as 29 kg/m², which is 'Out of Desirable Range' (Desirable Range: 18.5-25).
- Actionable data insights:** The second screenshot provides a deeper dive into the BMI result. It shows a horizontal scale from 18.5 to 25, with the user's result of 23 kg/m² marked. Below the scale is a 'Result Summary' stating the user is in a healthy weight range. A 'Result History' graph shows BMI values of 31, 30, and 23 over time from May 2018 to February 2020.
- Education pages:** The third screenshot shows an education page for 'High Blood Pressure'. It includes sections for 'About This Risk', 'Additional Support' (with a 'Consider a Blood Pressure Monitor' option), and 'Recommended Programs for You' (including 'Lower Your Blood Pressure for a Reward' and 'How to Lower Your Blood Pressure').
